Temperature Sensor - Overview / Connecting Parts for Temperature Sensors

Overview

In MISUMI's Temperature Sensor line, we offer Thermocouples (K Thermocouple and J Thermocouple) and Temperature Measuring Resistors by shape and application. Refer to the following abridged temperature sensor selection list when selecting your heater.

[Abridged Table for Temperature Sensor Selection]

Usage	Туре		
For limited space	L-Shaped (P.1656), Screw Mount (P.1661)		
	Ring Terminal, Spade Terminal (P.1660)		
For specific environments	Heat Resistant (P.1656), Chemical Resistant (P.1659)		
For easy replacing at the time of wire breakage	Connector Type (P.1659)		
To take 2 temperature signals from temperature measuring point	Double Element (P.1659)		
For measuring cylindrical workpieces	Band Type (P.1661)		
For close contact to a temperature measuring part	Spring Contact Type (P.1662)		
For measuring temperature of workniece surface	Surface Temperature Measurement Type Mannet Type (P1662)		

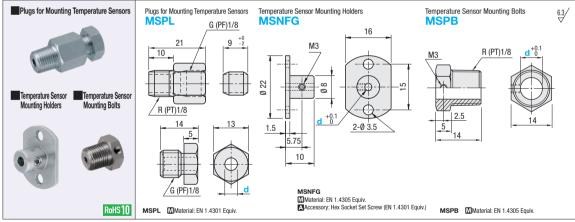

Precautions for Use

- (Bending of Sheath / Protective Tube) Sheath type can be bent (min. bending radius: sheath dia. x5). However, temperature detecting part (20mm from the tip) cannot be bent. Protective Tube cannot be bent. Bending prevents it from accurate temperature measurement.
- Compensation Lead Wires (P.1663) must be used to extend lead wires of thermocouple. For Temperature Measuring Resistor, use the same three lead wires in diameter, length and material.
- Be sure to use each part within its heat resisting temperature listed on product pages. Note that the wire might be broken if the temperature exceeds its heat resisting temperature even if it has higher maximum measurement temperature.
- Do not apply large external forces and vibrations.
- PBe sure to use sleeve, silicon tube and connector within respective allowable temperatures.

· Comparison of Thermocouple and Temperature Measuring Resistor

	K Thermocouple (J Thermocouple)	Temperature Measuring Resistor				
Advantages	Excellent in heat reaction	High accuracy of temperature measuring Connectable to regular wires				
Disadvantages	Accuracy of measurement temperature is slightly lower compared to Temperature Measuring Resistor Compensation Lead Wires must be used to extend the lead length	Expensive Weak against vibrations and impacts				
Precision	For Class 2 (JIS) -40°C - Less than 333°C	±0.3°C or ±0.5%

	4.8		-	

Cut the $\frac{1}{2}$ R(PT) thread in the heated object, fix the ①, and insert the sensor after tightening the ② and ③ temporarily Tighten 3, and secure 2 and 3.

*Because ② and ③ are unified after fixing, they cannot be removed and reused after tightening. The temperature

*When air-tightness is necessary, use Tapered Screw Type on P.1657

sensor according to the situation
